## Objectives

To create images that evoke imagination and exploration.  
To offer the viewer a unique perspective of the subject and a sense of wonder.

## Artist Statement

I've always been fascinated by how the human eye perceives the world – taking in form, light and color. By skewing shapes and tilting perception into an optical illusion an image can become ambiguous in the perceptual experience. I enjoy embracing these factors, utilizing them to draw the viewer into an image, asking for exploration.
